Greetings,

Have you been looking for an amazing gameplay programmer? Well, your search is over. Two of my favorite pastimes in life have been coding video games that I find interesting and innovative. Thus, a job as a Gameplay Programmer at Epic Games (which I learned about through a former teacher) would be a dream come true. Why I want to work at Epic Games rather than some other major company like Bethesda is the work ethic and office culture that Epic Games maintains that allows it to make polished creative games. I would love to work at Bethesda so that I can help create amazing games that people all over the world will love.

My most substantial work experience in computer science and creating games is a summer internship I completed coding small apps at MUSC. Additionally, I have completed an exclusive class on algorithms run by google. Lastly, I have competed and won a code jam which involves working with a small team of individuals to code a game in 24 hours that is based on a specific topic. I also have worked heavily with C++, Java, and HTML.

It would be my dream to work at Epic Games and if given the opportunity I should be able to make time for an interview with Epic Games any time in the next month. I have worked hard to attain the necessary qualifications to work at Epic Games and I hope to one day contribute to making some epic games as a Gameplay Programmer. Thank you for your time and consideration!

Sincerely,
Robert John Prentice
